

Claims: neck and head hammock including compartments and varying supports.

I claim:

1. A collapsible neck and head hammock including compartments comprising:

a) First, second, third and fourth connecting side arms

b) First, second, third, and fourth dowels

wherein the first and second dowels extend through the first and second connecting side arms at opposite ends thereof;

wherein the third and fourth dowels extend through the third and fourth connecting arms at opposite ends thereof;

c) A fifth central dowel extending through and connecting the first, second, third, and fourth connecting side arms at the central portions thereof, and pivotally attaching the first and fourth connecting side arms, and pivotally attaching the second and third connecting side arms,

d) Said central portion of said straight arms having a portion thereof being spaced apart.

e) Wherein the first and second said dowels are shorter than the third and fourth dowels

f) A first fabric panel having ends, one end being connected to said first dowel and the other end being connected to said third dowel, and

g) A second fabric panel having ends, one end being connected to said second dowel and the other end connected to said fourth dowel and

h) said panels being of a uneven lengths so that when said pairs of connecting arms are in said opened position, said first panel is firm while said second panel is less firm

2. The collapsible neck and head hammock including compartments of claim 1, further comprising a pocket attached to the first fabric panel.

3. The collapsible neck and head hammock including compartments of claim 1, further comprising 2 pockets attached to the first fabric panel.

4. The collapsible neck and head hammock including compartments of claim 1, further comprising a pocket attached to the second fabric panel.
5. The collapsible neck and head hammock including compartments of claim 1 wherein the pocket is an enclosable pocket
6. The collapsible neck and head hammock including compartments of claim 1 including a pocket wherein the pocket is open from the inner surface of the first fabric attached to the first fabric panel.
7. The apparatus of claim 1 wherein the pocket is an enclosable pocket.
8. The collapsible neck and head hammock including compartments of claim 1 further comprising at least one massaging unit located in the pocket.
9. The collapsible neck and head hammock including compartments of claim 1 wherein the at least one massaging unit is an electrical vibrator.
10. The collapsible neck and head hammock including compartments of claim 1 further comprising a gel pack located in the pocket.
11. The collapsible neck and head hammock including compartments of claim 1 further comprising an adjustable support
12. The collapsible neck and head hammock including compartments of claim 1 wherein the top legs are longer than the bottom legs
13. The collapsible neck and head hammock including compartments of claim 1 wherein the compartments are made to be water proof
14. (1) An collapsible neck and head hammock, comprising:
 - (a) a first frame having upper and lower ends and connecting side arms,
 - (b) a second frame having upper and lower ends and connecting side arms, wherein the connecting side arms are connected to the connecting side arms of the first frame,
 - (c) a first panel having ends, one end being connected to said first frame upper end and the other end connected to said second frame upper end,
 - (d) a second fabric panel having ends, one end being connected to said first frame lower end and the other end connected to said second frame lower end, and
 - (e) said panels being of a length so that when said frames are in said opened position, said fabric panels will be substantially taut,

a pocket wherein the pocket is open from the inner surface of the first fabric attached to the first fabric panel.

15. The apparatus of claim 14 wherein the pocket is an enclosable pocket.

16. The collapsible neck and head hammock of claim 14 further comprising at least one massaging unit located in the pocket.

17. The collapsible neck and head hammock of claim 16 wherein the at least one massaging unit is an electrical vibrator.

18. The collapsible neck and head hammock of claim 14 further comprising a gel pack located in the pocket.

19. An collapsible neck and head hammock comprising:

- a. a first frame having upper and lower ends and first and second substantially straight connecting side arms
- b. a second frame having upper and lower ends and first and second substantially straight connecting side arms wherein the upper ends of the first frame and second frame are longer than the lower ends of the first and second frames
- c. a first fabric panel wherein the upper and lower ends of the first frame are longer than the upper and lower ends of the second frame
- d. a second fabric panel wherein the upper and lower ends of the first frame are longer than the upper and lower ends of the second frame
- e. said panels wherein the upper and lower ends of the first frame are longer than the upper and lower ends of the second frame

20. An collapsible neck and head hammock, comprising:

(a) a first rectangular frame having upper and lower parallel ends and connecting parallel side legs,

(b) a second rectangular frame having upper and lower parallel ends and connecting parallel side legs, wherein the connecting parallel side legs are pivotally connected to the connecting parallel side legs of the first rectangular frame,

(c) a first fabric panel having ends, one end being connected to said first frame upper end and the other end connected to said second frame upper end,

(d) a second fabric panel having ends, one end being connected to said first frame lower end and the other end connected to said second frame lower end, and

(e) said panels being of a uneven lengths so that when said frames are in said opened position, said first fabric panel is taut while said second panel is less taut.

21. The collapsible neck and head hammock of claim 20, further comprising a pocket attached to the first fabric panel.

22. The collapsible neck and head hammock of claim 21 wherein the pocket is an enclosable pocket
